Website: www.bergmix.co.za

VAT No: 4790245155

Registration: 2007/027140/07

Directors: MD Connolly and MV Matekane

1. Background

BergMix is an independent ready-mix concrete supplier in central KwaZulu Natal. Founded in 2007 with the opening of our first plant in Estcourt, we now operate five state-of-the-art static ready-mix concrete plants with our head office in Nottingham Road. Our plants are located in:

- Estcourt
- Greytown
- Ladysmith
- Mooi River
- Wartburg

Mobile plants are also available for more remote projects.

2. About BergMix

BergMix specialises in providing a quality product with reliable service to our mainly rural client base.

The position of our plants allows us to cover a large geographical area supplying concrete over 100km from our plants. These plants are backed by a fleet of 26 concrete mixer trucks and our concrete pumping solution. Due to the proximity of these plants to each other, we are able to dynamically assign delivery resources to our customer's requirements.

We pride ourselves on the high level of service to our customers and see this as the primary reason for our success to date.

3. Products & Services

Products

All products are designed by a concrete technologist and in accordance with the relevant SABS specifications. In addition to our standard mixes, BergMix is able to produce a wide range of products which include, but are not limited to:

- Fibre Concretes
- Durability Concretes
- Grouts
- Self-Compacting Concretes
- Mortar Mix
- Soilcretes
- Shotcretes
- Light Weight Concretes

Plants

All our plants are fitted with automated electronic weigh batching systems and produce concrete in accordance with the relevant SABS specifications. BergMix has cutting edge software systems in place that control and manage the batching process and allow for accurate and critical downstream value add.

Fleet

Concrete Mixer Trucks

BergMix currently runs a fleet of 26 concrete mixer trucks. All vehicles are fitted with a computerised tracking system which allow the company to provide accurate and real-time information to the client as well as ensuring on time delivery of concrete to the site.

Concrete Pump

BergMix currently has a 20 metre Putzmeister boom pump. The 20 metre boom pump is able to handle most of our rural pumping requirements. However, an additional 50 metres of static pipe can be supplied where required. The pump enables increased efficiency, productivity and quality of finished product on larger pours.

Technical

All aggregate raw materials used within our product range and are sampled and tested in line with the relevant SABS requirements.

All concrete is weigh-batched and backed by comprehensive and technologically advanced process controls. Test cubes are made, stored and tested in accordance with the SANS 5861-3:2006 requirement.

All BergMix testing and quality control is handled by a leading independent concrete laboratory - Construction Materials Testing (CMT Labs). CMT operates a commercial laboratory in Estcourt and conducts all of our internal process control testing.

In addition to on-site testing, off-site monitoring and analysis supports both quality control and consistent delivery service standards.

4. Management

BergMix is an owner managed company. We believe it is the personal touch that sets us apart from our competitors. BergMix relies on our team of dedicated staff to ensure that the company's ethos and vision are implemented on a daily basis.

All of our batch plants have a dedicated supervisor who makes sure we never lose that personal touch with our clients. When required site visits can be arranged. All plants are backed by a central operations team that enable the smooth running of the company as well as a dedicated team of back office staff that handle all the administration.

Customers deal with people that are empowered to make decisions; you will not find any call centres at BergMix.

Directors

- Mark D Connolly
- Motanyane V Matekane
